Recent UW Business Administration graduate working across product requirements, business systems, data architecture, testing, analytics, and AI-assisted development to turn ambiguous workflows into usable products.

EDUCATION

University of Washington Bothell

Bothell, WA

Bachelor of Arts in Business Administration | GPA 3.64/4.00

Aug 2026

Academic focus: Finance and Management Information Systems | Annual Dean's List 2024-2025

PROFESSIONAL EXPERIENCE

United Indians of All Tribes Foundation

Nov 2023 - Nov 2025

Garden Intern Supervisor | Seattle, WA

- Rebuilt a fragmented volunteer-reporting process from paper logs into digital forms and an Excel workflow with structured inputs, validation, correction paths, and automated consolidation, reducing preparation from **roughly 4-8 hours to about 40 minutes**.
- Designed and led a **6-week horticulture and water-systems internship for 8 interns** using structured learning plans, weekly check-ins, individualized feedback, and performance metrics.

PRODUCT & SYSTEMS PROJECTS

System (formerly MasterBase)

Aug 2026 - Present

Personal Product / Software Project | Kotlin Multiplatform / SQLDelight / Supabase

- Define product requirements, UI flows, analytics rules, offline/sync behavior, scope decisions, and acceptance criteria for a Kotlin Multiplatform Android/Desktop personal-data platform.
- Designed local-first behavior around **stable record IDs, pending mutations, conflict handling, and historical representations** so later edits do not rewrite historical analytical truth.
- Read and modify Kotlin and SQL directly, field-test Android/Desktop behavior, and use regression cases for offline edits, timestamps, historical personal bests, invalid observations, and sync conflicts.
- Converted outside-user field-test findings into product requirements for onboarding, builder discoverability, execution correctness, schedule semantics, and error/recovery behavior.
- Built a GitHub-backed **multi-worker relay workflow** to coordinate AI-assisted implementation, debugging, audits, test expansion, and handoffs with explicit task contracts and validation gates.

UniPath Student Lifecycle Platform

Mar - Jun 2026

B BUS 489 Five-Person MIS Capstone | PostgreSQL / Python | Grade 3.9

- Designed a normalized **34-table PostgreSQL schema/ERD** spanning university search, applications, academic progress, and alumni outcomes with UUID keys, foreign keys, and junction relationships.
- Built the Python proof of concept for ranking, semantic matching, admission-estimate, and academic-risk workflows using **synthetic/prepared data**.
- Co-developed six-layer architecture, API/data-flow concepts, role-based journeys, and explainability/fallback/privacy considerations with the five-person team.

CommuteWise

2026

CSS 360 Software Engineering Team Project | FastAPI / Map APIs

- Contributed product/feature ideation, requirements consolidation across project phases, integration review, manual/user testing, bug identification, and final-release validation for a map-based commute-analysis application.
- Focused primarily on product/process and QA while another teammate drove much of the implementation; the released app uses a **FastAPI backend plus external map APIs** for saved locations, routes, and historical commute statistics.

CSS 475 Database Systems

2026

PostgreSQL / SQL Coursework and Team Database/API Work

- Built and tested PostgreSQL/SQL database functionality using schemas/ERDs, parameterized queries, joins, reads/writes, validation, and Python-backed database APIs.
- Applied transactions, optimization, application integration, and relational-design concepts that support product requirements and data-layer implementation decisions.

SKILLS

Product & Systems: Requirements, workflow/process design, UI/UX, testing/regression, Kotlin/KMP, Compose Multiplatform, SQLDelight, Supabase/Postgres, APIs/data flow, Git/GitHub.

Analytics & Data: Python, SQL/PostgreSQL, relational modeling, Excel/Power Query/VBA, analytics semantics, local-first/offline-sync concepts.
